Public-Private Cybersecurity Action Plans

High-profile incidents have been a wake-up call last year to significantly strengthen our cybersecurity defense. A key part of this initiative has been to accelerate the conversation and information sharing between the government and the private sector. To this end, the White House launched a series of sector-by-sector efforts to safeguard the Nation's critical infrastructure from cyber threats through public-private 100-day action plans.

The first of those action plans has been the [U.S. electricity sector](#) launched in April 2021 and led by DOE in close coordination with CISA. This effort was followed by a 100-day action plan for the [natural gas pipeline sector](#) in July 2021 and a third action plan for the [water sector](#) in January 2022 led by the EPA in partnership with CISA.

We can expect the administration to continue this series of sprints through all [16 critical sectors](#) defined by DHS. The team at Network Perception is committed to protect mission-critical assets across all operational technology networks through better visualization and verification.

Upcoming Webinar

[CS2AI Manufacturing Symposium](#)

Secure Control Systems for Smart Manufacturing: May 25th 1:00 - 5:15PM EST
